

# **HPC Software License Management Guide**

**R1.2**

## **Release Note**

1<sup>st</sup> edition

## Overview

We release the packages of the license access library version 1.2 and license server version 1.2 for HPC system software. These are necessary to use HPC system software.

## Contents

- |                          |                                |
|--------------------------|--------------------------------|
| ① License access library | aurlic-lib-1.2-1.x86_64.rpm    |
| ② License server         | aurlic-server-1.2-1.x86_64.rpm |

## Renewal contents

The restriction target of a SDK license was changed to the execution number of users from the number of executing process of the compiler.

## Procedures

- ✓ Please refer to “HPC Software License Management Guide” for installation and procedures.
- ✓ When you update from 1.1 to 1.2, the license server and the license access libraries on all the client hosts should be updated.
- ✓ When updating the license server, the license file can be continued to use. However, the configuration file (aur\_license.conf) should be edit if you have changed it from the default (the configuration file before updating is saved as aur\_license.conf.rpmsave).
